## SUMMARY

Software Engineer building high-performance distributed systems and scalable backend platforms. Architected a **7-microservice async engine** reducing regressions by 40% and reclaiming **800+ annual dev-hours**. Engineered a **multi-tenant gateway** with token-based isolation, slashing operational toil by 60%. Expert in **Java, Go, and Python**, with a track record of migrating a critical legacy system (90% TCO reduction) and architecting a **GenAI-driven retrieval engine** that accelerated action-plan generation from **3 hours to <5 seconds**.

## EXPERIENCE

**Amazon Web Services** | *Application Developer (Software Engineer)* Aug 2023 – Present

- **Architected and led development** of a production-grade AI platform with Strands-based multi-agent architecture, OpenSearch vector store, and Claude Sonnet for semantic retrieval and action planning over 100k+ documents; accelerating project action plan generation **from hours to <5 seconds**.
- **Engineered** a distributed PR analysis system with 7 microservices (Python, TypeScript), SQS async queues, and pluggable SCM integrations; modeled codebases as graphs to detect downstream impacts, enforce code styles/patterns, and recommend fixes across repositories, **reducing regressions by 40% and saving ~200 manual review hours** quarterly.
- **Designed** a multi-tenant MCP Gateway for secure onboarding of REST, JDBC, and Lambda tools, with token-based isolation, normalized DB schemas, fine-grained access controls, and auditability; eliminated per-tenant deployments, **cutting operational overhead by ~60%**.
- **Built** an automated vector database migration/provisioning framework with schema inference, pluggable adapters, and standardized interfaces for OpenSearch/PostgreSQL; reduced onboarding time from days to hours and **manual effort by 80%**.
- **Modernized** mission-critical financial systems by migrating ~6.5M lines of legacy code to Java Spring Boot/Angular, optimizing batch workflows and backend reliability to hit strict SLAs; enabled mainframe decommissioning with **~90% TCO reduction**.
- **Developed** an IAM policy management portal for centralized governance of policy/role assignments across AWS accounts; enabling create/audit/deploy workflows with simulation and drift detection.

**Mable.AI** | *Software Developer*

Mar 2023 – Jul 2023

- **Led development** of core services and REST APIs for event collection, processing, and delivery using Node.js, Go, Python, and PostgreSQL.
- **Deployed** applications across multiple environments, including production, on Kubernetes using Helm charts and Kustomize templates.

## SKILLS

**Programming Languages:** Java, Go, Python, JavaScript, TypeScript

**Generative AI:** Agentic AI, Multi-Agent Architectures, RAG, Vector Databases, Prompt Engineering, MCP (Model Context Protocol), Token Optimization, Model Evaluation

**Backend & Platform:** Distributed Systems, REST APIs, Microservices, Spring Boot, Node.js, PostgreSQL

**Cloud & DevOps:** AWS, Docker, Kubernetes, Serverless, CI/CD, IaC

## EDUCATION

**National Institute of Technology, Warangal, India**

Bachelor of Technology in Computer Science & Engineering | 2019 – 2023
